

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A method in a computer system for presenting under the control of a user a display of information, comprising the activities of:
 - (a) receiving instructions from the user to select a tabular format;
 - (b) in response to step (a), displaying to the user a menu of data selections, each data selection providing a respective one of a plurality of predetermined, fixed user ~~selectible~~ selectable cell arrangements for display in tabular format; and
 - (c) adjusting dimensions of a selected cell within a selected one of the plurality of user selectable cell arrangements to permit display of a data selection.

2. (Currently Amended) The method of claim 1, ~~further including the activity of receiving instructions from the user via a manual pointing device wherein~~ said plurality of predetermined, fixed user selectable cell arrangements include an arrangement having a first row with a first number of columns and a second row with a different second number of columns.

3. (Previously Presented) The method of claim 1, further including the activities of:
 - displaying to the user a data selection menu including an entry representing a first waveform for possible display within a first cell within the selected cell arrangement;
 - receiving instructions from the user to display the first waveform within the first cell;
 - displaying to the user a data selection menu including an entry representing a second waveform for possible display within the first cell; and
 - receiving instructions from the user to display the second waveform within the first cell; and

simultaneously displaying the first waveform superimposed upon the second waveform within the cell.

4. (Previously Presented) The method of claim 1, further comprising the activity of displaying to the user a color selection menu listing possible background color choices for each cell of the cell arrangement.

5. (Previously Presented) The method of claim 1, further comprising the activity of displaying to the user a file name selection menu displaying a region in which all previous user selections may be saved for future use.

6. (Currently Amended) A method for providing a user interface display, comprising the activities of:

(a) displaying an image set of predefined tables, each of said predefined tables having a plurality of cells in a respective one of a plurality of predetermined, fixed user selectable cell arrangements;

(b) selecting one of the predefined tables;

(c) displaying the user selectable cell arrangement defined by the predefined table;

(d) displaying a data selection menu for each cell appearing within the predefined table;

(e) selecting one data set from the data selection menu for at least one cell; and

(f) in response to the selection of activity (e), adjusting the dimensions of some cells to permit legible data display.

7. (Previously Presented) The method of claim 6, further comprising the activities of:

positioning an indicator of a manual pointing device over a border of a cell within the selected table;

selecting the border of the cell over which the indicator resides;

moving the indicator to a desired position; and

selecting the desired position to define a new cell border location.

8. (Previously Presented) The method of claim 6, further comprising the activities of:

- positioning an indicator of a manual pointing device over a border of a column containing at least two cells within the selected table;
- selecting the border of the column over which the indicator resides;
- moving the indicator to a desired position;
- selecting the desired position to define a new column border location; and
- redimensioning the cells within the column so as to abut the new column border location.

9. (Currently Amended) A computerized method of displaying medical data, comprising:

- obtaining at least a first and second stream of real time medical data;
- selecting a table from a menu of tables, each table in said menu including multiple cells in a respective one of a plurality of predetermined, fixed user selectable cell arrangements;
- displaying the selected table having multiple cells;
- manipulating a manual pointing device to select a first cell within the table;
- inserting the first data stream into the first cell;
- manipulating a manual pointing device to select a second cell within the table;

and

- inserting the second data stream into the second cell.

10. (Previously Presented) The method of claim 9, further comprising the activity of displaying a display selection menu upon selecting a cell within the table.

11. (Previously Presented) The method of claim 10, further comprising the activity of listing in association the display selection menu a choice of data and cell appearance submenus.

12. (Currently Amended) The method of claim 11, further comprising the activities of:

saving the displayed table;
creating a second table having multiple cells; and
inserting the saved table ~~into~~ into a cell of the second table.

13. (Previously Presented) The method of claim 12, further comprising the activity of inserting a display generated in response to an internet connection into a cell of the second table.

14. (New) The method of claim 1, wherein at least one of said plurality of predetermined, fixed user selectable cell arrangements includes a varying number of rows for each column in said cell arrangement.

15. (New) The method of claim 6, wherein at least one of said plurality of predetermined, fixed user selectable cell arrangements includes a varying number of rows for each column in said cell arrangement.

16. (New) The method of claim 9, wherein at least one of said plurality of predetermined, fixed user selectable cell arrangements includes a varying number of rows for each column in said cell arrangement.

17. (New) The method of claim 1, wherein said activity of adjusting dimensions adjusts only the width of cells in a single row of a cell arrangement having a plurality of rows.

18. (New) The method of claim 6, wherein said activity of adjusting dimensions adjusts only the width of cells in a single row of a cell arrangement having a plurality of rows.

19. (New) The method of claim 1, wherein said plurality of predetermined, fixed user selectable cell arrangements include an arrangement having a first column with a first number of rows and a second column with a different second number of rows.
